cellular response to cytokine stimulus
response to biotic stimulus
receptor signaling pathway via JAK−STAT
regulation of defense response
homeostasis of number of cells
negative regulation of catabolic process
regulation of leukocyte proliferation
biological process involved in interspecies interaction between organisms
regulation of nitric oxide biosynthetic process
peptidyl−tyrosine phosphorylation
regulation of protein localization
regulation of DNA−binding transcription factor activity
induction of programmed cell death
inflammatory response to antigenic stimulus
positive regulation of protein metabolic process
regulation of cell adhesion
positive regulation of DNA metabolic process
leukocyte mediated cytotoxicity
regulation of cytokine production
positive regulation of tissue remodeling
hematopoietic or lymphoid organ development
positive regulation of T cell differentiation
