

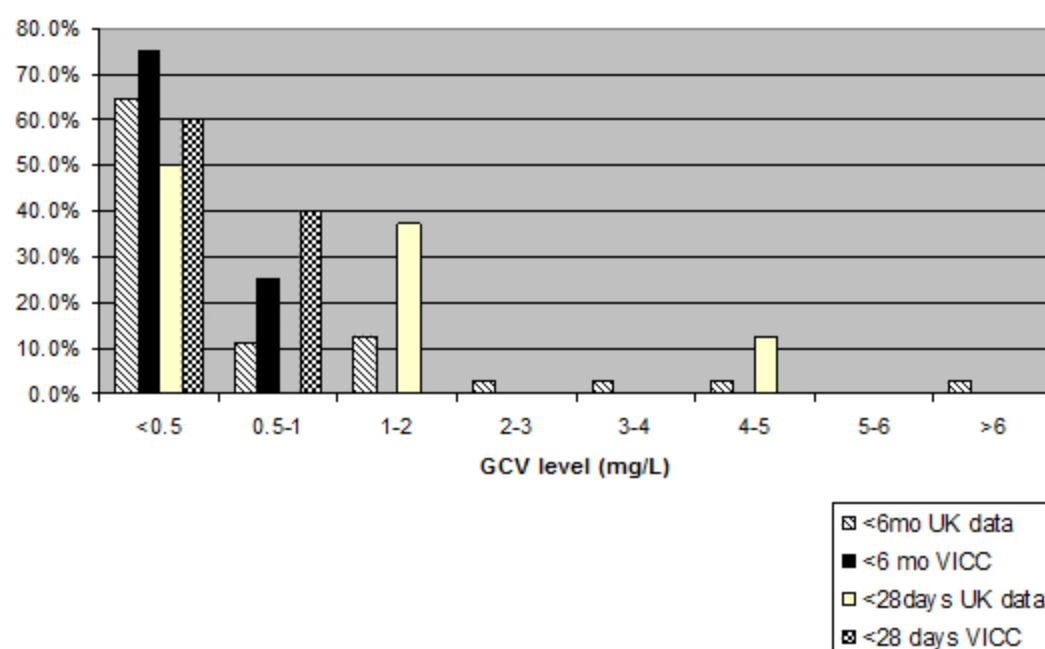

**Figure 4: Pre- (A) and Post- (B) dose ganciclovir levels in babies treated for congenital CMV**

Ganciclovir (GCV) levels measured in babies aged <6 months of age (<6mo) and <28 days of age (<28 days) being treated for congenital CMV. Levels are compared between those derived from anonymised data received from the British Antimicrobial reference laboratory and described in detail elsewhere (Luck et al IJAA 2011) and those obtained during the viral load and immunology in congenital CMV study (VICC).

### A. Pre-dose

### B. Post-dose
