

Factors affecting delayed loss of compensatory reserve (increased sAMP) after TSCI.

A. AMP values averaged over the first 3 h after surgery. Each dot is a patient, 79 patients, line is mean. Mean daily AMP minus AMP averaged over the first 3 h postoperatively vs. days after surgery for **B.** 45 patients with cervical TSCI, 29 patients with thoracic TSCI, and **C.** 11 patients without laminectomy, 68 patients with laminectomy. Mean \pm standard error.
