

Figure 1: PRISMA flowchart

Figure 2

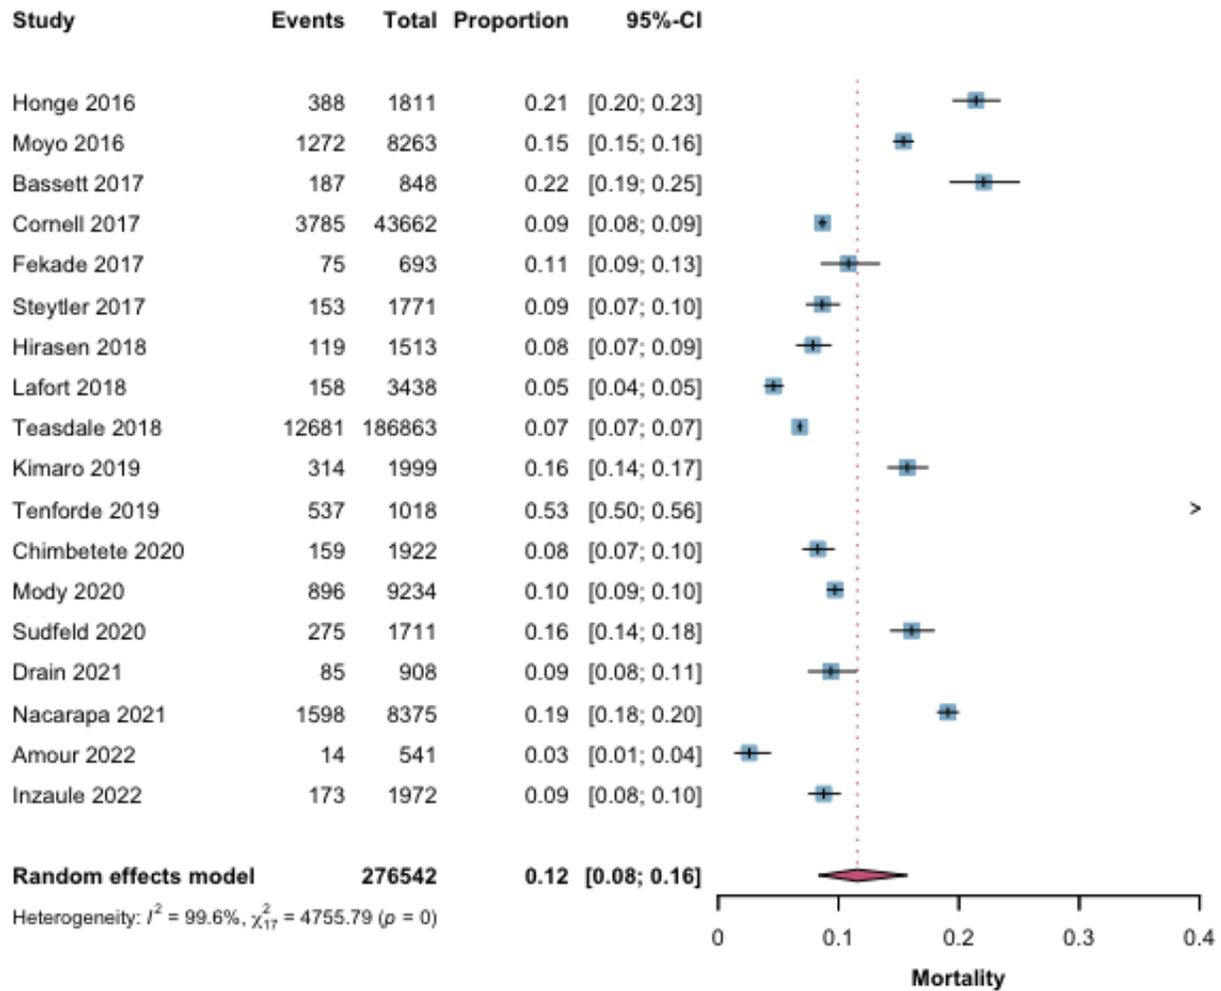

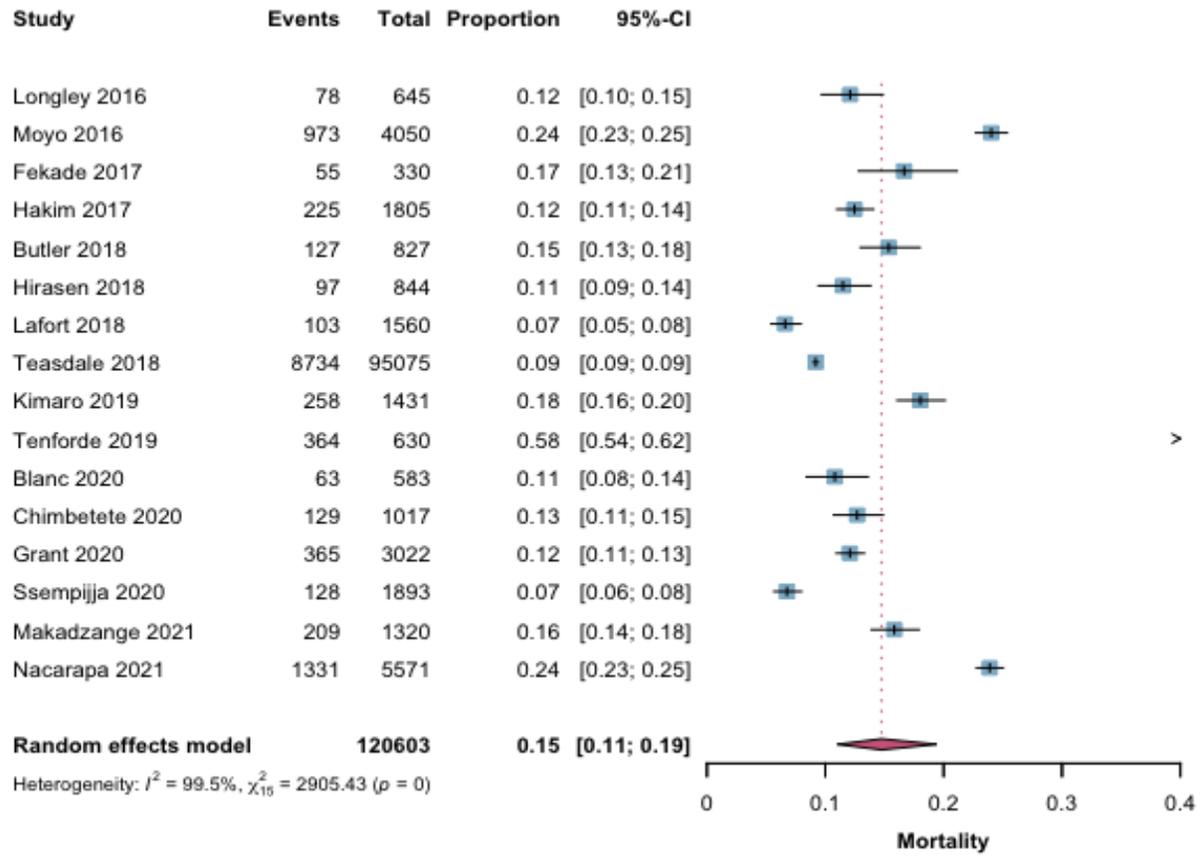

Figure 2: One-year mortality for CD4 \leq 200 cells/mm³.

Blue squares show point estimates (vertical black line) and horizontal black line represents 95% CI. Red diamond represents pooled estimate including 95% CI. Dotted red line shows the overall pooled estimate.

Figure 3

A

B

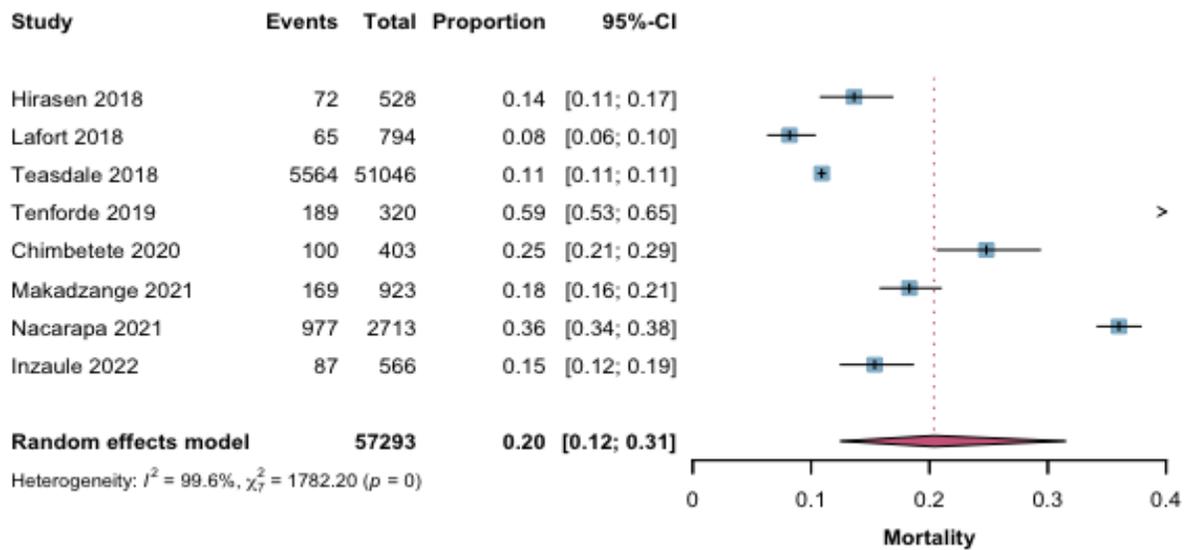

Figure 3: One-year mortality for (A) CD4 \leq 100 cells/mm³ and (B) CD4 \leq 50 cells/mm³.

Blue squares show point estimates (vertical black line) and horizontal black line represents 95% CI. Red diamond represents pooled estimate including 95% CI. Dotted red line shows the overall pooled estimate.

Figure 4

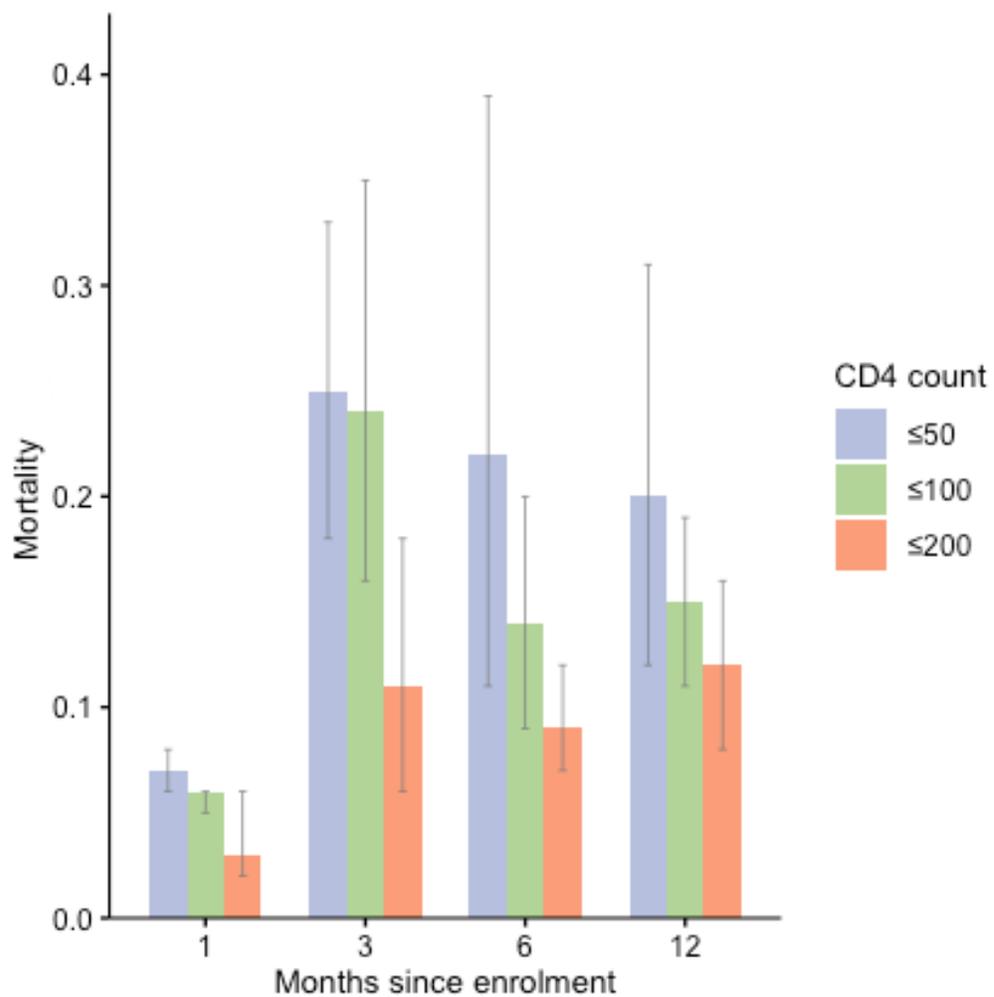

Figure 4: Mortality at discrete timepoints in the first year stratified by CD4 count.

Bars indicate pooled estimate and lines represent 95% CI.

Figure 5

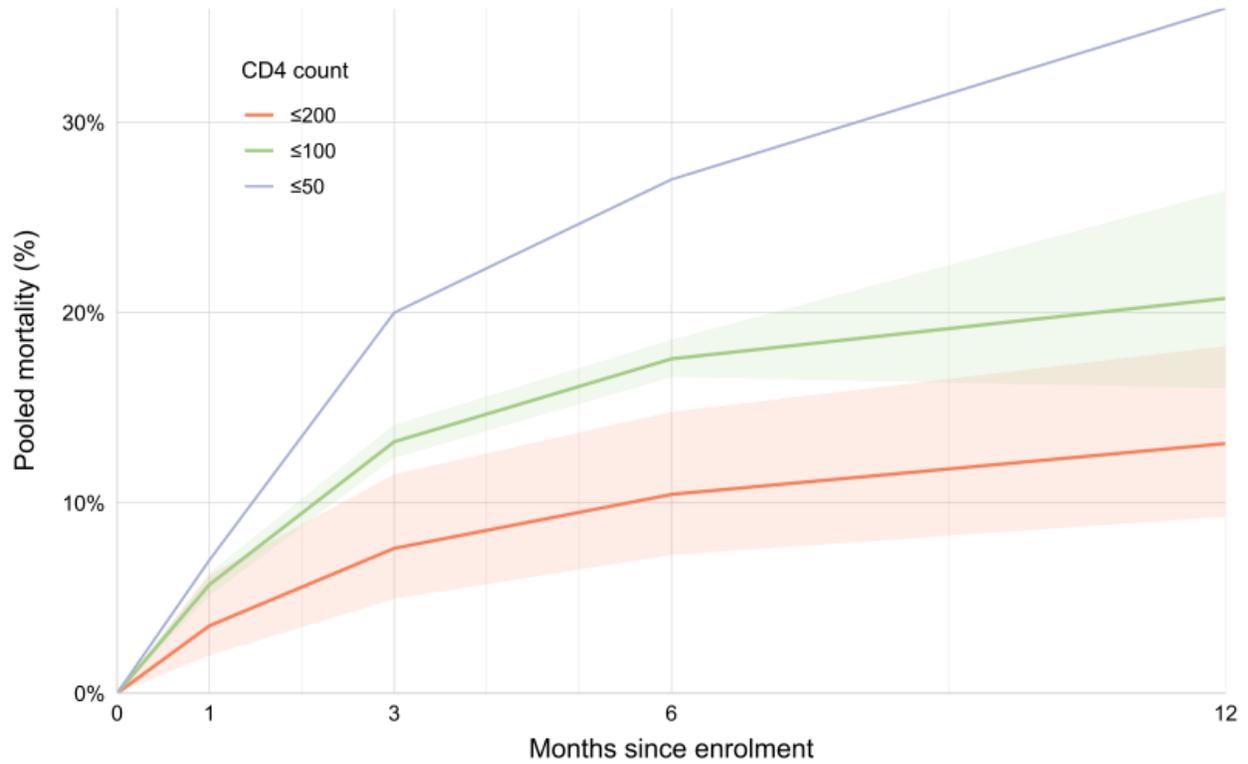

Figure 5: Pooled mortality by time since enrolment, stratified by CD4 count.

Only studies reporting mortality at all specified timepoints were included. Number of studies: CD4 \leq 200 cells/mm³: 5; CD4 \leq 100 cells/mm³: 2; CD4 \leq 50 cells/mm³: 1. Shaded areas represent 95% confidence intervals (not included for the CD4 < 50 stratum as this was based on a single study).
