

## Supplementary Materials

**Supplementary Figure S1:** Directed acyclic graph.

**Supplementary Figure S2:** Distribution of outcome variables - (A) percentage of missed session, and (B) and standardised test scores.

**Supplementary Figure S3:** Flowchart indicating sample selection.

**Supplementary Table S1:** Frequencies of housing condition features in the two analytical samples.

**Supplementary Figure S4:** Correlation coefficients (Kendall's tau) between housing condition in the (A) Absence, and in the (B) Attainment samples

**Supplementary Table S2:** Number and percentage of total sessions missed across Year 1 to 11.

**Supplementary Table S3:** Association between each 1 SD decrease in housing quality and percentage of missed sessions in years 1 to 11.

**Supplementary Table S4:** Associations between 'High versus 'Low' housing quality and percentage of missed sessions in years 1 to 11.

**Supplementary Table S5:** Associations between housing conditions and percentage of total missed sessions in years 1 to 11.

**Supplementary Table S6:** Associations between housing conditions and % of missed sessions in years 1 to 11 due to authorised absences.

**Supplementary Table S7:** Associations between housing conditions and % of missed sessions in years 1 to 11 due to unauthorised absences.

**Supplementary Table S8:** Average education attainment by housing quality.

**Supplementary Table S9:** Associations between 'High' versus 'Low' housing quality and educational attainment.

**Supplementary Table S10:** Associations between housing conditions and educational attainment.

**Supplementary Table S11:** Interaction between housing quality, household income/sex and % of missed sessions in years 1 to 11.

**Supplementary Table S12:** Interaction between housing quality, household income/sex and educational attainment.

**Supplementary Table S13:** Association between each 1 SD decrease in housing quality and percentage of missed sessions in years 1 to 11 among non-movers.

**Supplementary Table S14:** Association between each 1 SD decrease in housing quality and educational attainment among non-movers.

**Supplementary Table S15:** Association between each 1 SD decrease in housing quality and percentage of total missed sessions in years 1 to 11 after multiple imputation.

**Supplementary Table S16:** Association between each 1 SD decrease in housing quality and school performance after multiple imputation.

**Supplementary Table S17:** Associations between standardised housing conditions and percentage of total missed sessions in years 1 to 11.

**Supplementary Table S18:** Associations between standardised housing conditions and educational attainment.

**Supplementary Table S19:** Associations between housing quality scale and log-transformed percentage of total missed sessions in years 1 to 11.

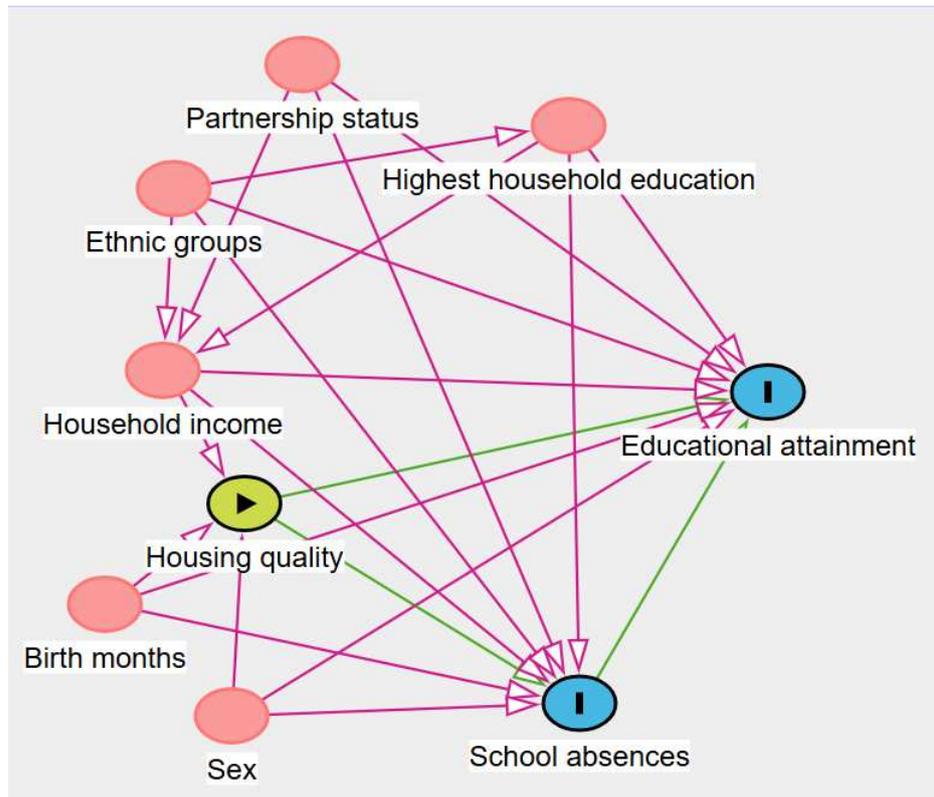

**Supplementary Table S20:** Associations between housing quality items and log-transformed percentage of total missed sessions in years 1 to 11.

**Supplementary Table S21:** Associations between housing condition values and percentage of total missed sessions in years 1 to 11.

**Supplementary Table S22:** Associations between housing condition values and educational attainment.

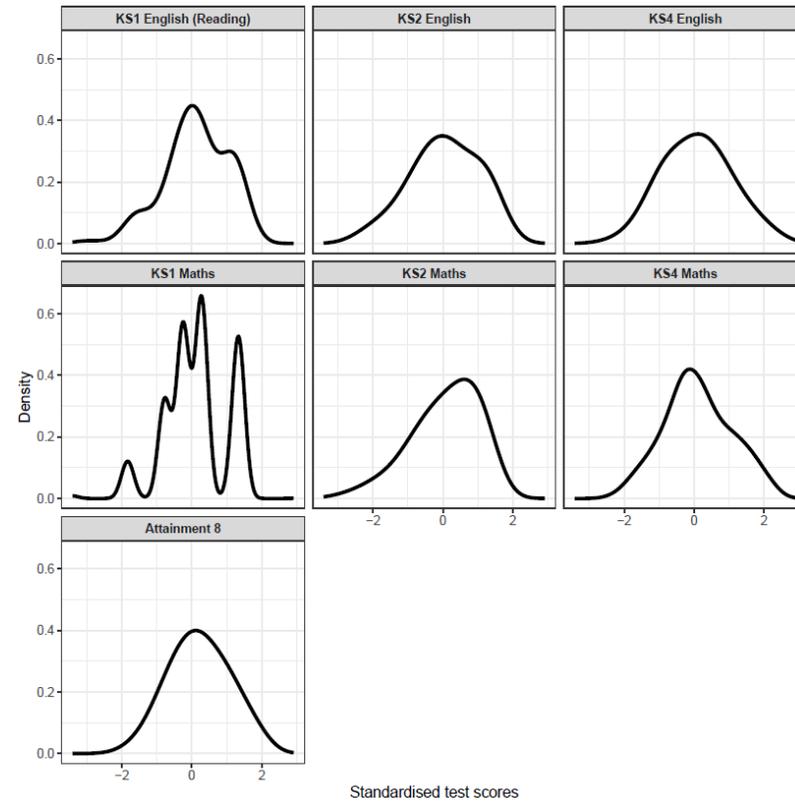

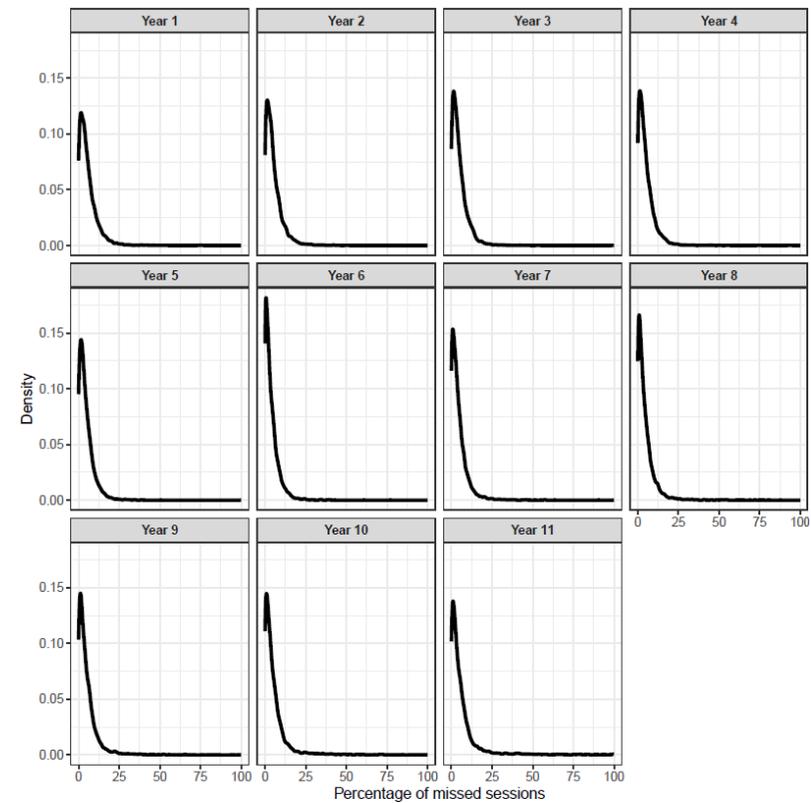

**Supplementary Table S23:** Associations between housing quality scale, housing conditions and percentage of missed sessions across compulsory education using two methods of pooling across years.

**Supplementary Figure S1:** Directed acyclic graph. Note: housing quality is measured as a composite index of accommodation type, floor level, garden access, damp, heating, and overcrowding.

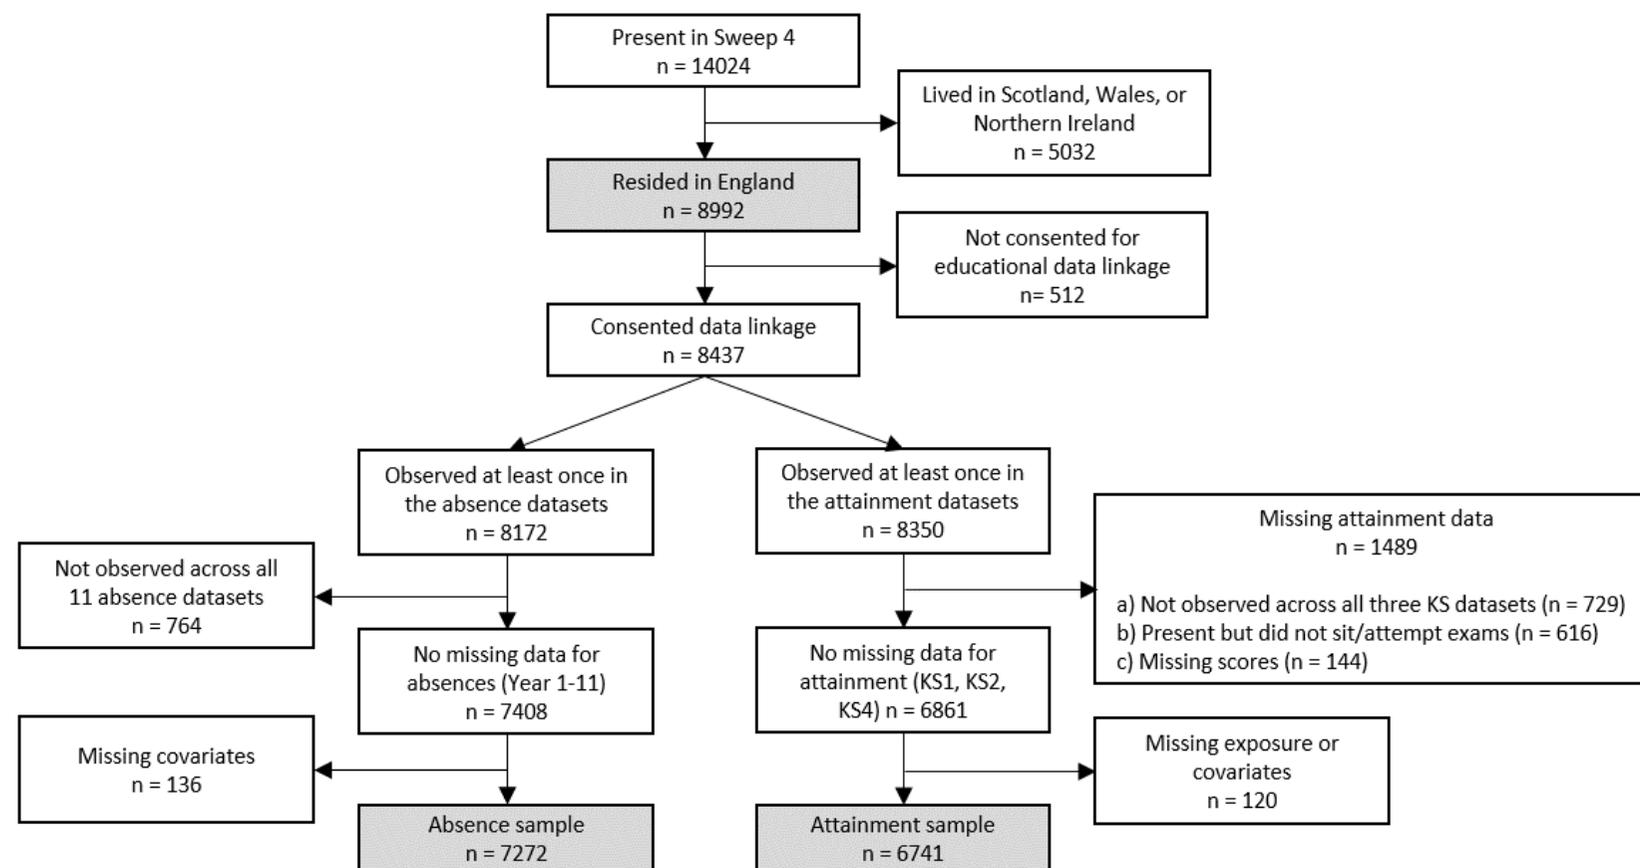

**Supplementary Figure S2:** Distribution of outcome variables - (A) percentage of missed session (n=7272), and (B) and standardised test scores (n=6741).

(A)

(B)

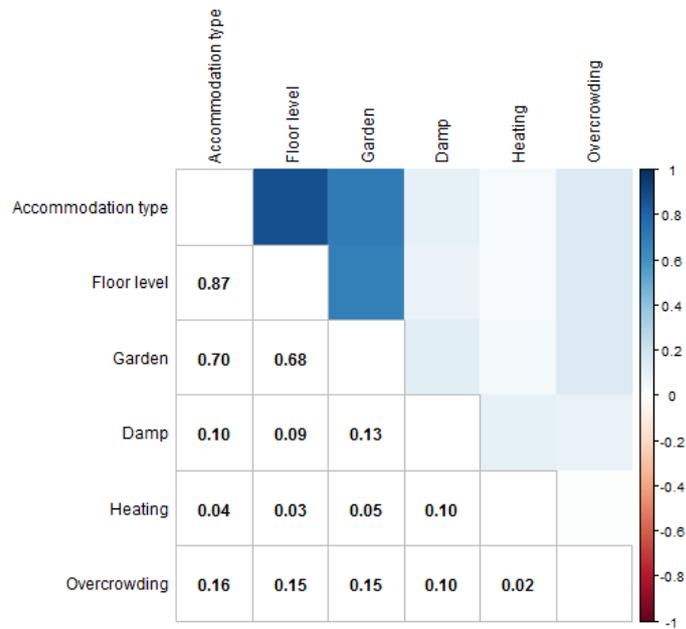

**Supplementary Figure S3:** Flowchart indicating sample selection in the Millennium Cohort Study

**Supplementary Table S1:** Frequencies of housing condition features in the two analytical samples of the Millennium Cohort Study.

	<b>Absence sample</b> (n=7272)	<b>Attainment sample</b> (n=6741)
Type of accommodation		
0 (high)	6651 (91.4%)	6166 (91.5%)
1	610 (8.4%)	564 (8.3%)
2 (low)	11 (0.2%)	11 (0.2%)
Floor level		
0 (high)	6779 (93.3%)	6285 (93.4%)
1	238 (3.3%)	216 (3.3%)
2 (low)	255 (3.3%)	240 (3.3%)
Garden access		
0 (high)	6538 (89.9%)	6082 (90.4%)
1	129 (2.0%)	122 (2.0%)
2 (low)	605 (8.1%)	537 (7.6%)
Damp and mould		
0 (high)	6126 (84.3%)	5724 (85.1%)
1	956 (12.9%)	856 (12.3%)
2 (low)	190 (2.8%)	161 (2.6%)
Heating		
0 (high)	6974 (95.5%)	6476 (95.8%)
1	NA	NA
2 (low)	298 (4.5%)	265 (4.2%)
Overcrowding		
0 (high)	1075 (15.6%)	1026 (16.1%)
1	5173 (72.2%)	4808 (72.4%)
2 (low)	1024 (12.3%)	907 (11.6%)

**Supplementary Figure S4:** Correlation coefficients (Kendall's tau) between housing condition in the (A) Absence (n=7272), and in the (B) Attainment (n=6741) samples.

(A)

(B)

**Supplementary Table S2:** Number and percentage of total sessions missed across Year 1 to 11 in the Millennium Cohort Study.

Year	Total number of sessions missed		Percentage of sessions missed	
	Average	95% CI	Average	95% CI
Year 1 (2006/2007)	16.98	16.39, 17.57	5.51	5.32, 5.71
Year 2 (2007/2008)	15.47	14.97, 15.98	5.07	4.90, 5.24
Year 3 (2008/2009)	14.66	14.18, 15.13	4.82	4.65, 4.98
Year 4 (2009/2010)	14.87	14.44, 15.31	4.84	4.70, 4.98
Year 5 (2010/2011)	13.97	13.57, 14.37	4.61	4.47, 4.74
Year 6 (2011/2012)	12.64	12.22, 13.07	4.01	3.88, 4.15
Year 7 (2012/2013)	14.17	13.64, 14.70	4.70	4.52, 4.87
Year 8 (2013/2014)	14.04	13.55, 14.54	4.67	4.50, 4.85
Year 9 (2014/2015)	16.61	15.98, 17.24	5.45	5.24, 5.66
Year 10 (2015/2016)	18.10	17.36, 18.83	5.83	5.59, 6.08
Year 11 (2016/2017)	20.86	19.83, 21.89	6.95	6.61, 7.30
<b>Total (Year 1-11)</b>	<b>172.38</b>	<b>167.78, 176.98</b>	<b>5.13</b>	<b>4.99, 5.27</b>
<b>By housing quality</b>				
High	163.5	158.8, 168.1	4.86	4.72, 5.00
Low	216.9	204.2, 229.5	6.49	6.11, 6.88

Note: missed sessions were recorded by the Department for Education during the first 5 half terms. The sample size was n=7272.

**Supplementary Table S3:** Association between each 1 SD decrease in housing quality and percentage of missed sessions in years 1 to 11 in the Millennium Cohort Study.

Missing data was imputed using multiple imputations by chained regressions (10 datasets) based on all variables in the models plus auxiliary variables of housing tenure, area deprivation and employment. Linear regressions with complex survey weights were conducted. Adjusted models controlled for sex, month of birth, ethnic groups, maternal partnership status, highest household education, and household income. The sample size was n=7408.

Missing data was imputed using multiple imputations by chained regressions (10 datasets) based on all variables in the models plus auxiliary variables of housing tenure, area deprivation and employment. Linear regressions with complex survey weights were conducted. Adjusted models controlled for sex, month of birth, ethnic groups, maternal partnership status, highest household education, and household income. The sample size was n=6861.

Linear regressions with complex survey weights were conducted separately. Adjusted models controlled for sex, month of birth, ethnic groups, maternal partnership status, highest household education, and household income. Reference values were the positive housing conditions (i.e. value '0'), associations for intermediate (value '1') and negative (value '2') features from the same models are shown. The sample size was n=7272.

**Supplementary Table S22:** Associations between housing condition values and educational attainment in the Millennium Cohort Study.

Pooled linear regressions and linear mixed-effects regression with complex survey weights were conducted separately for each item and the total scores. Models were controlled for sex, month of birth, ethnic groups, maternal partnership status, highest household education, and household income. The sample size was  $n=7272$ , with a total of 79992 observations.
